

## Introducing the **Absolute E-Z Up<sup>®</sup> Rocker<sup>™</sup>**

Long-term expertise by our manufacturer Bravi in the business of overhead installation of ceiling, acoustic tiles and drywall led to the invention of an extraordinary device –

The **Absolute E-Z Up<sup>®</sup> Rocker<sup>™</sup>**.

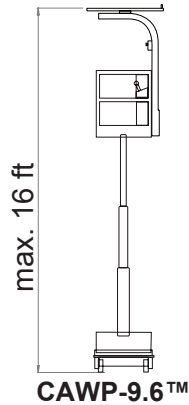

The **Rocker** is certified to be used only on the **CAWP-9.6<sup>™</sup>**. With the **AEUP Rocker**, what once was a two-person project is now safely a one-person task. The **Rocker** greatly simplifies the positioning of panels, saving manpower, reducing costs and letting one man alone work the job. The **Rocker** eliminates the need for manual dry-wall lifts and makes the job safer and easier.

*Work just became fun again...*

Composed of a lightweight, electric powered track and detachable adjustable frame to hold and lift sheets, this simple yet ingenious attachment allows one man to lift panels without assistance.

Setup is fast and requires no tools. Once the job is completed, it is quickly removable for easy storage. Total weight of the complete attachment: 99.2 lbs .

The cradle can be adjusted to hold panels up to 12 ft (3.65 m) and lowers off the floor for easy panel loading. It can lift up to 89 lbs. The attachment can be adjusted to three different positions to allow for workman height.

Activated directly from the platform with a push of a button, the sheet travels up the track into the overhead position, then retaining the drywall sheet in the proper location, leaving the worker free to screw or nail it to the joists/studs.

**Manufacturer 5-2-1 Platinum Warranty, *The BEST in the industry!***
